DETAILED ACTION

1. This office action is in response to paper filed on 06/29/04.

Allowable Subject Matter

2. Claim 1-28 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

In the REMARKS filed on 06/29/04, applicants have disqualified the applied art as prior art for § 103 rejection in the office action dated 04/02/04. Therefore, the rejection of claims 1-28 is overcome. The invention discloses methods and systems for detecting and rejecting a co-channel interferer. The conventional receiver for a TDMA system, for instance in a mobile phone, the disturbance is often modeled as white noise. The conventional systems do not provide for a co-channel interference limited scenario where the noise is not white. Particularly, prior art of record, taken individually or collectively, fails to fairly teach method and apparatus for co-channel interference including "detecting a time offset between the desired burst and the co-channel interferer burst; and selecting a detection procedure based on the time offset between the desired burst and the co-channel interferer burst" in independent claims 1, 14 (claims 2-13, 15-28 depend therefrom). Thus, claims 1-28 are found to be novel and unobvious over prior art of record.
